

## PHP developer opportunity at growing software business

Location: 10 miles south of Bristol and Bath, Bristol BS39  
Job Type: Full time

### Background

One Tree is a technology company that provides gift voucher solutions to the hospitality and leisure industry. They work with multiple clients throughout the UK and primarily provide their service through an online web application that allows organisations and their customers to place orders for gift vouchers, make payment online and redeem the vouchers. The application is built using the CodeIgniter framework for the back-end with a mixture of Bootstrap and Stencil.js for the front-end.

One Tree is looking for an experienced web application developer to support their sustained growth. The role will involve taking technical leadership of the web application, managing the existing codebase and developing new functionality in-line with best practices. You will be working in a small team alongside the business owners, a part-time development lead and an external consultant who was involved in building the platform originally.

Development tasks will span both front-end and back-end functionality, alongside server administration, using a range of technologies with an overall focus on integrating with the existing codebase and delivering scalable, optimised, accessible and secure code. This is a great opportunity for the right person with real potential within a growing company.

There can be an element of remote work to the role though you need to be able to easily get to the office in Paulton (South of Bristol and Bath) - having your own transport is a bonus. Reachable by bus but easier by car/moped/bike!

Modern serviced offices. Free Tea and Coffee! Free parking. Free bike shed! Collaborative atmosphere. Team player required. Optional free membership of the 'Bad Jokes Club'.

### Skills required

You will need to be driven, adaptable and capable, with an open mind to new technologies and a desire to learn new skills. From the outset we would expect high levels of confidence with the following technologies:

- LAMP web service stack
- PHP-based web application frameworks (CodeIgniter preferred)
- PHP-based content management systems (WordPress preferred)
- HTML5 and CSS3
- Javascript (including jQuery and ES6+)
- Web components (e.g. React or Stencil)
- Git version control
- Experience integrating with payment processing systems (e.g. Stripe, PayPal)
- Linux server administration

## Desirable qualities

- Strong understanding of web and programming principles, including security and accessibility best practices
- Self-starter with ability to manage your own time and find solutions to problems with little support
- An interest in planning and architecting the right solutions to a problem
- Ability to understand and translate non-technical requirements and ask the right questions
- Strong written and oral communication skills
- Familiarity with Agile development process principles and Git workflows
- Enthusiastic about adopting contemporary technologies and approaches
- Familiarity with microservices and ability to build scalable software architectures
- Familiarity with testing principles such as automated testing and test-driven development
- Confident administering Linux system infrastructure
- Take pride in (and ownership over) the work you contribute to
- A minimum of 2 years commercial experience
- Driving licence and own vehicle

## Remuneration

We are looking for full-time candidates and the role comes with the following benefits:

- A convivial working environment
- Free parking
- Free Tea and Coffee
- Opportunity for some remote and flexible working
- 20 days holiday plus Bank holidays
- Salary will be dependent on experience but in the region of £28-35k

## Absolutely no agencies

### To Apply:

**Please send your cv with a covering letter telling us what you could bring to the job to:**
